SUMMARY

Security Analyst with SOC specialization, skilled in incident monitoring, threat detection, and cloud security operations. Proficient in SIEM, IDS/IPS, endpoint monitoring, and SOAR automation. Strong foundation in networking fundamentals (IP addressing, subnetting, routing, DNS/domain naming) and cryptographic hashing for data integrity, with knowledge of compliance frameworks (ISO 27001, GDPR, PDPB). Certified through IBM, Microsoft, Google, and completed Forage virtual experience programs. Hands-on projects include threat intelligence integration, network hunting, and cloud security monitoring.

SKILLS

SOC Monitoring & Operations

- SIEM alert triage (Splunk, ELK)
- IOC tracking & log analysis (Sysmon, Windows/Linux)
- Endpoint & network monitoring (EDR, Snort, Zeek)
- SOAR automation & incident response
- Threat intelligence correlation & malware analysis
- Ticketing & workflow management (ServiceNow, Jira)

Technical & Programming

- Python, SQL, Bash, PowerShell
- Automation scripting
- GitHub reporting & documentation
- Markdown/HTML conversion for security artifacts

Cloud Security & Infrastructure

- AWS (EC2, S3, RDS, Route 53, CloudFront, CloudWatch, CloudFormation)
- Microsoft Azure security fundamentals
- Server setup (Nginx/Apache, SSL, Firewalls, Docker, CI/CD pipelines)
- Cloud threat detection & misconfiguration analysis

EDUCATION

Bachelor of Computer Applications (BCA)

Jan 2023– April 2026

Osmania University, Hyderabad

- Focus: Cybersecurity & Networking
- Current CGPA : 9.2

PROJECTS

Threat Intelligence Integration (MISP)

- Merged threat feeds with SIEM alerts to strengthen detection workflows.
- Automated correlation of indicators of compromise (IOCs) for faster incident triage.

Endpoint Detection & Persistence Monitoring (Sysmon + Splunk)

- Configured Sysmon to capture persistence techniques and mapped events to MITRE ATT&CK.
- Developed Splunk queries to detect suspicious registry changes and scheduled tasks.

Network Threat Hunting (Zeek IDS)

- Deployed Zeek IDS to monitor network traffic and identify anomalies.
- Authored custom detection rules to flag malicious patterns and lateral movement.

Cloud Security Monitoring (AWS/Azure)

- Deployed and secured EC2, S3, and RDS instances; configured CloudWatch alerts.
- Detected misconfigurations and simulated lateral movement in cloud environments.

Incident Response Simulation

- Orchestrated containment and escalation procedures in SOC workflows.
- Created incident response playbooks with clear escalation paths and reporting artifacts.

Vulnerability Assessment & Penetration Testing (Nmap, Metasploit, Wireshark)

- Conducted scans to identify open ports, misconfigurations, and exploitable services.
- Validated findings using exploit frameworks and documented remediation steps.

CERTIFICATIONS & VIRTUAL EXPERIENCES

- IBM SkillsBuild – Cybersecurity, AI, Cloud
- Microsoft Learn – Azure, Security Fundamentals
- Google Digital Garage – Cybersecurity Fundamentals, Data Protection, Career Development
- Forage – Virtual internships completed with :
 - JPMorgan Chase – Cybersecurity Virtual Experience
 - Mastercard – Cybersecurity Job Simulation
 - PwC – Cybersecurity Consulting Simulation

EXPERIENCE

Cybersecurity Intern – Security Analyst (Applied Labs & SOC Projects)

- Monitored and analyzed security events using Splunk SIEM and Sysmon logs, detecting persistence techniques and mapping to MITRE ATT&CK.
- Conducted network threat hunting with Zeek IDS, authoring custom detection rules to identify anomalies and lateral movement.
- Integrated MISP threat intelligence feeds with SIEM alerts to strengthen detection workflows.
- Executed incident response simulations, creating containment, escalation, and reporting procedures.
- Deployed and secured AWS/Azure cloud environments (EC2, S3, RDS, CloudWatch), detecting misconfigurations and suspicious activity.
- Configured Nginx/Apache servers with SSL, firewalls, and CI/CD pipelines for secure hosting.
- Performed vulnerability assessments and penetration testing using Nmap, Metasploit, Burp Suite, and verified remediation steps.
- Used ServiceNow and Jira for ticketing workflows, incident escalation, and reporting.
- Assisted in phishing email analysis and IOC triage, referencing Office 365 security controls.
- Utilized Qualys vulnerability management and Microsoft Defender ATP EDR for endpoint monitoring.
- Supported network operations tasks including IP addressing, subnetting, routing, and DNS/domain naming for infrastructure monitoring.
- Applied cryptographic hashing techniques for file integrity checks and secure authentication workflows.
- Optimized SIEM alerts to cut false positives and improve detection accuracy.

Cybersecurity Consulting Virtual Internships and JOB SIMULATIONS – Forage

- Deloitte – Completed SOC workflow simulation, analyzed phishing attempts, and documented incident reports.
- Mastercard – Investigated security alerts, applied risk assessment, and recommended mitigation strategies.
- TATA – Conducted compliance reviews, produced client-ready security reports, and advised on governance frameworks.
